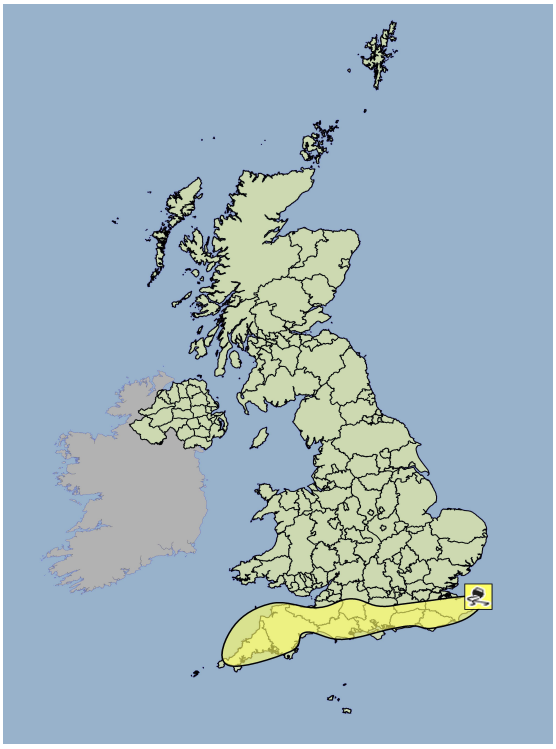
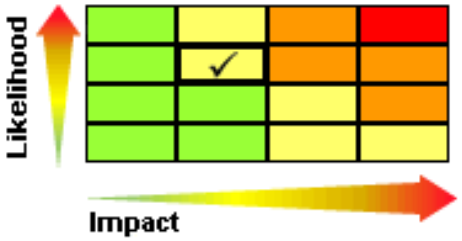
National Severe Weather Warning Service





Chief Forecasters Assessment
Light winds and clearing skies are allowing temperatures to fall away overnight. With surfaces wet from seepage from saturated ground, icy stretches are likely to develop on untreated surfaces. As well as this an area of showers, perhaps locally wintry, are moving across southwestern areas and will run along the south coast. These may wash off any treatment that has been put on roads increasing the risk of icy stretches.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **22:45 on Sat, 04th Jan 2014** until **09:00 on Sun, 05th Jan 2014**

As skies clear overnight across southern parts of Britain, road surface temperatures are expected to fall below freezing . This will allow some icy stretches to develop on untreated surfaces or where earlier treatment is washed off by showers.

The public should be aware of the potential for difficult driving conditions.

Road surface temperatures should begin to rise above freezing in the west late in the night but not until mid-morning in the east.
